Design

Rowan-Salisbury Schools

Mario, presently in the 12th grade at South Rowan High School, is nearing the culmination of his exploration in Roblox and AI. His enthusiasm for **creating AI models and mastering Python** has been a rewarding journey.

Having always harbored a passion for Roblox and game development, Mario now channels his expertise through SparkNC, where he serves as an intern, aiding his peers in game development.

Recognizing a gap in creativity and completion within modeling and game development among his peers, Mario took the initiative to address this issue. He introduced **quarterly competitions**, the latest being a Winter competition challenging students to craft captivating winter scenes.

Currently engaged in courses such as Coding with “**Roblox**”, “**Build and AI Model Level 2**”, and “**Oracles and Prophecy**”, Mario continues to expand his skill set and contribute to the vibrant world of game development.
